

Having thus described the preferred embodiments, I claim:

1. A pharmaceutical composition comprising:
an effective dosage amount of alpha-methyl-para-tyrosine; and
an effective dosage amount of 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone.
2. The composition of claim 1 further comprising:
an effective amount of a urine alkalinizer.
3. The composition of claim 1 wherein said effective dosage amount of alpha-methyl-para-tyrosine ranges from about 1 mg to about 200 mg per kg of body weight per day.
4. The composition of claim 3 wherein said effective dosage amount of alpha-methyl-para-tyrosine ranges from about 15 mg to about 50 mg per kg of body weight per day.
5. The composition of claim 1 wherein said effective dosage amount of 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone ranges from about 0.015 mg to about 1.0 mg per kg of body weight per day.
6. The composition of claim 5 wherein said effective dosage amount of 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone ranges from about 0.05 mg to about 0.80 mg per kg of body weight per day.
7. The composition of claim 1 further comprising:
an effective dosage amount of Naltrexone.

8. A pharmaceutical composition comprising: an effective dosage amount of alpha methyl paratyrosine; and an effective dosage amount of Naltrexone.

9. A method for treating at least one of (i) addiction to heroin, narcotics, cocaine, amphetamines, alcohol, nicotine or marijuana; and (ii) schizophrenia or manic depressive psychosis, said method comprising:

administering an effective dosage of alpha-methyl-para-tyrosine to a patient in need of such treatment; and

administering an effective dosage amount of 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone to said patient.

10. The method of claim 9 wherein said effective dosage amount of alpha-methyl-para-tyrosine ranges from about 1 mg to about 200 mg per kg of body weight per day.

11. The method of claim 9 wherein said effective dosage amount of 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone ranges from about 50 mg to about 185 mg per kg of body weight per day.

12. The method of claim 9 wherein said effective dosage amount of 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone ranges from about 0.015 mg to about 1.0 mg per kg of body weight per day.

13. The method of claim 9 wherein said effective dosage amount of 4-[4-(4-(p-chlorophenyl)-4-hydroxy-piperidino)-4'-fluorobutyrophenone ranges from about 0.05 mg to about 0.80 mg per kg of body weight per day.

14. The method of claim 9 further comprising:
administering an effective dosage amount of Naltrexone.

15. A method for treating alcoholism or marijuana addiction comprising:

administering an effective dosage amount of alpha-methyl-para-tyrosine; and 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone.

16. A method for treating alcoholism comprising:

administering an effective dosage amount of alpha-methyl-para-tyrosine; and

administering an effective dosage amount of Naltrexone.

17. A pharmaceutical composition consisting essentially of:

an effective dosage amount in the range from about 1 mg to about 200 mg per kg of body weight per day of alpha-methyl-para-tyrosine; and

5 an effective dosage amount in the range from about 0.015 mg to about 1.0 mg per kg of body weight per day of 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone.

18. The composition of claim 17 wherein said effective dosage amount of alpha-methyl-para-tyrosine ranges from about 15 mg to about 50 mg per kg of body weight per day.

19. The composition of claim 17 wherein said effective dosage amount of 4-[4-(p-chlorophenyl)-4-hydroxy-piperidino]-4'-fluorobutyrophenone ranges from about 0.05 mg to about 0.80 mg per kg of body weight per day.
